## **DETAILED ACTION**

### ***Response to Amendments/ Arguments***

Applicant's amendments submitted on September 24, 2009 amending claim 12 and canceling claims 13-15 have been entered. Claims 16-24 have been previously canceled by Applicant. Currently claims 1-12 are pending.

The previous objection to the abstract is withdrawn as Applicants have submitted a new abstract in the proper format on September 24, 2009.

The previous objection to the Oath/Declaration is withdrawn as Applicants have filed a new Oath/Declaration on June 5, 2009.

The previous rejection under 35 USC 251 as being based upon a defective reissue oath/declaration is withdrawn as Applicants have filed a new Oath/Declaration on June 5, 2009.

Due to the cancellation of claims 13-15, the previous rejection under 35 USC 251 as being an improper recapture of broadened claimed subject matter previously surrendered is withdrawn.

Due to Applicants amendment of claim 12, the previous rejections under 35 USC 112 first and second paragraph are hereby withdrawn.

### **Examiner's Statement of Reasons for Allowance**

The following is an examiner's statement of reasons for allowance:

Art Unit: 1617

Claims 1-12 of the present reissue application claim a solvent extraction process for preparing microspheres of an antigen containing biodegradable poly(DL-lactide-co-glycolide). Claim 12 further claims a method of controlling average particle sizes of the microspheres that contain the antigen. The closest prior art reference is Tice et al. U.S. Patent No. 4,530,840.

Tice et al. disclose an anti-inflammatory agent containing microparticle compositions prepared by dissolving an anti-inflammatory agent in a solvent selected from the group consisting of acetone, a halogenated hydrocarbon, an aromatic hydrocarbon, a halogenated aromatic hydrocarbon, a cyclic ether, an alcohol and water and dissolving a biocompatible and biodegradable wall forming material in the solvent; dispersing the solvent containing the anti-inflammatory agent and wall forming material in a continuous phase processing medium of water, toluene, xylene, a synthetic oil or a natural oil; evaporating a portion of the solvent from the dispersion step to form microparticles containing the anti-inflammatory agent in suspension; and extracting the remainder of the solvent from the microparticles.

Tice et al. do not teach the use of an acetonitrile solvent. Tice et al. do not teach first lyophilizing (the step that stabilizes and isolates the antigen being encapsulated from the solvents in the process) an antigen-sucrose to make a hydrophilic matrix prior to dispersal of the matrix into the acetonitrile solvent. The method disclosed in Tice et al. do not utilize the emulsion viscosity exclusively as a means of controlling sphere size and preventing agglomeration of particles during the emulsification process. Finally

Art Unit: 1617

Tice et al. do not teach the use of a second organic solvent to extract the unwanted emulsion components.

As such claims 1-12 of the instant application are novel and non-obvious over the closest related prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusions***

Claims 1-12 are allowed. Claims 13-24 are cancelled.
